TECHNICAL SKILLS

- **Languages:** C#, Python, Java, JavaScript, TypeScript, SQL
- **Frameworks & Databases:** .NET, Angular, React, Node.js, FastAPI, PostgreSQL
- **Cloud & DevOps:** AWS, Azure, Docker, Linux, CI/CD with GitHub Actions
- **Development & Testing:** Git, Azure DevOps, pull requests, unit testing, Agile
- **AI & Computer Vision:** PyTorch, TensorFlow, YOLO, OpenCV

SOFTWARE & IT EXPERIENCE

Software Engineer | Department of Social Protection (2026)

- Started as a software engineering intern and continued as a Software Engineer after three months.
- Built and tested MyWelfare features in a C#/.NET MVC application using Angular and SQL.
- Resolved more than 20 tickets covering feature changes, defect fixes and system testing. Also contributed to business analysis.
- Used Git branches and took part in pull request reviews through Azure DevOps. Joined daily stand-ups and led some of them.

IT Administrator | Quality Tractor Parts Ltd. (2025)

- Wrote Python scripts to automate three recurring tasks, saving at least 10 hours a week.
- Completed 12 or more tickets per sprint and took part in sprint planning and daily scrums.
- Helped roll out two-factor authentication for more than 1,000 customer accounts. Reduced IT ticket resolution time to under 24 hours.

PROJECTS

AABCi: AI Automated Ballot Counter Ireland | Python, PyTorch, YOLO, TensorFlow, OpenCV, AWS, Docker, PostgreSQL

- Developed ballot recognition software with an electoral commission consultant. It uses YOLO to detect official stamps, OpenCV checks to verify them and TensorFlow to read handwritten preferences. Uncertain results are flagged for human review.
- Connected AWS S3 processing with PostgreSQL storage and audit records. DynamoDB locks and database constraints prevent duplicate counting.

Aithne Fish Detection | Python, VIAME, FastAPI, PostgreSQL, React, TypeScript, Docker

- Built a full stack application that detects, tracks and counts fish passages in uploaded video and across 17 live underwater cameras. It can also identify species through the Fishial AI API.
- Connected VIAME processing to a FastAPI backend and React dashboard. PostgreSQL row locks coordinate video jobs; the application also supports human review and CSV exports, with the API and workers running as Docker services.

AI Portfolio Chat Bot | React, Node.js, OpenAI API, Netlify

- Connected a React chat interface to a Node.js serverless function to answer portfolio questions using shared profile data. Added input validation, response caching and request limits to manage API usage.

Game Platform | C#, .NET, WPF, SQL, LINQ, IGDB API

- Created a desktop application for login, game browsing, purchases and library management. It uses the IGDB API for a catalogue of more than 428,000 games, alongside a local SQL database, LINQ queries and unit tests.

OTHER PROJECTS

- Personal Portfolio | React, Node.js, AWS S3, Netlify
- Weather App | React, JavaScript, OpenWeather API, local storage
- Angular Game Platform | Angular, TypeScript, REST APIs

EDUCATION

BSc (Hons) Computing (Software), Level 8 | ATU Sligo

Expected graduation: 2027

Year 3 result: First Class Honours (1:1)

Selected Year 3 modules

Module	Grade
Open Stack Development	77%
Database Programming	76%
Mobile Application Development	76%
Project 300	74%

ADDITIONAL EXPERIENCE

Volunteer Coding Mentor | CoderDojo Mullingar (2024 - 2025)

- Taught coding to groups of 10 to 15 students, adapting explanations to their needs.
- Planned coding sessions with five fellow mentors.

Counter, Poll Clerk & Tallier | Department of Justice (2024)

- Counted and tallied votes with the count team and assisted voters as Poll Clerk, following electoral procedures.

Crew Member | McDonald's Mullingar (2022 - 2025)

- Worked with the crew to serve more than 300 customers a day during busy shifts.

TEAMWORK & COMMUNICATION

- **Teamwork:** Worked with a UX designer to improve website navigation and user flow.
- **Communication:** Wrote reports from internal and external meetings, recording key points and next actions.

PROFESSIONAL DEVELOPMENT

Agile requirements · System testing · Git workflows · Working with Git (2026).
